Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Four superoxide dismutase (EC 1.15.1.1) (Mn) - rice (fragment)
C;Species: Oryza sativa (rice)
R;Ramo, M.; Tsugita, A.
Submitted to JIPID, June 1991
A;Reference number: PSO184
A;Reference number: PSO186
A;Molecule type: protein
A;Residues: 1-19 < KAM>
A;Residues: 1-19 < KAM>
C;Function:

A;Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxyg C;Superfamily: superoxide dismutase (Mn) C;Keywords: manganese; metalloprotein; oxidoreductase

Frimary structure and biological activity of bradykinin potentiating peptides from Bothrops insularis snake venom.";
J. Protein Chem. 9:221-227(1990)
-!-FUNCTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE ANGIOTENSIN-CONVERTING ENZYME AND ENHANCES THE ACTION OF BRADYKININ BY INDIRECT HYPOTENSIVE AGENT.
IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.

-!- FUNCTION: DESTROYS RADICALS WHICH ARE NORMALLY PRODUCED WITHIN THE CELLS AND ARE TOXIC TO BIOLOGICAL SYSTEMS (BY SIMILARITY).

-!- CATALYIC ACTIVITY: 2 PEROXIDE RADICAL + 2 H(+) = 0(2) + H(2)0(2).

-!- SUBUNIT: HOMOTETRAMER (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE IRON/MANGANESE SUPEROXIDE DISMUTASE

                                          antiganic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-archmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of 1gE, and so preventing triggering and activation of mast cells and basophils and downregulation of 1gE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against 1gE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY79994 to AAX80084 represent amino conformation.

specific for a target effector site on the epsilon-heavy chain of 1gE, and so preventing triggering and activation of mast cells and basophils and downregulation of 1gE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against 1gE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermattis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiseuous T helper cell epitope (I) that include a promiseuous T helper cell epitope conjugates of (I) that include a promiseuous T helper cell epitope (I) that include a promiseuous T helper cell epitope constraints (disuffide bridge) to stabilise conformational features and maninace cross reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY7994 to AAY80084 represent mino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antignic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allargies, asthma, anaphylaxis, or flea-meliaty dermatitis. Nucleic acids that encode these compounds are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunoglobulin E; IgE; epsilon heavy chain; antigenic; antigen; immunogenic; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-anti-anaphylactic; anti-asthmatic; asthmatic; asthmatic; anti-anaphylactic; dermatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antigenic peptide from the CH3 domain of immunoglobulin E, fusions for immunization against allergy \,

The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tumour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malania); for cancer immunotherapy; for inhibition of the action of luteinising hormone celesasing hormone (LHRH) for contraception, treatment of hormone-
refombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAN79994 to AAN80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Promiscuous T-cell epitope; measles virus F protein; MVF; hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; lutefulsing hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis
                                                                                                                                                                                                                                                                                     Gaps

dependent cancer, prevention of boar taint in meat, and concording to promoting the growth of animals; or for inmunocastration; for promoting the growth of animals; or for treating allergies or arteriosclerosis. Incorporation of a promiscuous or treating allergies or arteriosclerosis. Incorporation of a promiscuous or improves capacity to induce a strong Thelper cell-mediated immune response, resulting in production of antibodies against a target antigion. The arreplace carrier proteins and pathopach derived Thelper epitopes. Sequence AAY91121 represents a promiscuous Thelper epitope from the measles virus F (MYV) protein and sequences AAY91122. 1913.6.

WAY9126 and AAY9125 are present synthetic The pitope based on the heatilist B virus (HWY) surface antigen, and sequences AAY9114. Paper epitope AAY91157 are synthetic epitopes derived from this HBV epitope. AAY91157 are synthetic epitopes derived from this HBV epitope. AAY91157 and AAY91207 and AAY91204 virus of AAY91156-Y91306. AAY91207 and AAY91204 virus of AAY91166-AAY91166. AAY91167-Y91306 as comprising an LHRH sequence joined to a promiscuous Thepitope. AAY91197 peptides comprising somatostatin and AAY91201-Y91207 are artigenic peptides comprising somatostatin and Thepitope. Somatostatin for peptides comprising somatostatin and Thepitope. Somatostatin and human CO4 CDR2-like domain antigenic site, and AAY91209-Y90211 are MVH The infection of T cells. AAY90212 sequence growth in livestock. AAY91208 is a peptide which may be used to promote growth in any be used to promote growth in the growth of T cells. AAY90212 is a modified version of a human IgE (immunoglobulin E) Tolls domain, and AAY90213-Y90219 are Thepitope. AAY91201 is a peptide end and AAY91221 is a modified version of a human ige controled by the derived from foot and mouth disease virus (FWDV) by the peptide and AAY91223 is a phasmodium falciparum circumsporozoite (CS) artigen on and AAY91223 is a phasmodium falcipar medical and AAY91232 are antigenic peptides and AAY91223 or antigen and and and

antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies and anti-asthmatic properties. (I) induces polyclonal antibodies of specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. (compinant production of corresponding peptides or in DNA vaccines. (inctional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY79994 to AAY80084 represent amino caid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immunoglobulin E; IgE; epsilon heavy chain; antigenic; antigen; immunoglobulin immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-acthmatic; asthma; anaphylaxis; dermatitis.
                                               New antigenic peptide from the CH3 domain of immunoglobulin E, fusions
                                                                                                                                     The present invention describes immunoglobulin E (IgE)-CH3 domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          65.9%; Score 89; DB 21; Length 25 60.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0
                                                                                                                                                                                                                                                                                 The specification describes peptide immunogens comprising a synthetic helper T cell (Th) epitope and a target antigen, luteinising hormone-releasing hormone (LHRH). The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of spermatogenesis, ovulation, oestrus, sexual development and secretion of sex hormones. Provision of a promiscuous T helper epitope (which is functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as (reversible) contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar taint (and improve meat quality) and for immunocastration. The present sequence appears in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immunoglobulin E; IgE; epsilon heavy chain; antigenic; antigen; fimmunoglobulin immunostimulatory; carrier protein; helper T cell epitope; antibody; allergic disease; immunisation; anti-allergic; anti-asthmatic; asthma; anaphylaxis; dermatitis.
                                                                                                                                                                                  New peptide immunogen containing luteinising hormone-releasing hormone antigen site and helper T cell epitope, for e.g. contraception and treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                              The present invention describes immunoglobulin E (IgE)-CH3 domain antibodies antigent peptides (I). (I) have anti-allergic, anti-anaphylactic antigent peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AA779994 to AAX80084 represent amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAW24098-106 are peptide fragments containing at least 5 continuous amino acids of the partial canine immunoglobulin E (IgE) protein shown in AAW24097. The peptides are used for the preparation of anti-canine IgE antibody. The anti-canine IgE antibody can be used for the diagnosis of canine allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunoglobulin E; IgE; anti-canine IgE antibody; allergy; canine; dog.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

                                                                                                                                                                                                                                                                                                                The invention provides immunoglobulin E (IgE) antagonists comprising one or more of the FcepsilonRI receptor-binding determinant sites of human IgE. The antagonists include IgE variants comprising an immunoglobulin template and binding determinant sequences (bds) CDbds, EFbds and the sequence shown in AAY4281. The CDbds (CD loop binding determinant the EFbds (EF loop binding determinant sequence) are selected from the sequences shown in AAY42578 and the EFbds (EF loop binding determinant sequences are selected from sequences shown in AAY42578 442580. The variants are useful in raising and screening anti-IgE antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment and prophylaxis of allergic
                                                                                                                                                                                                                                             Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IGE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic

The antagonists include IgE variants comprising an immunoglobulin template and binding determinant sequences (bds) CDBds. EFbds and the sequence shown in AAY42581. The CDBds (CD loop binding determinant sequence) are selected from the sequences shown in AAY42561. The CDBds (FS loop binding determinant sequences shown in AAY42562. The variants are useful in raising and screening anti-IgE antibodies, in the isolation and purlification of FcepsilonRI receptor and in the treatment and prophylaxis of allergic
                                                                                                                                                                                                                                                                                                                                                 Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IgE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Canine; allergy; antibody 15A.2; IgE; B cell; mast cell; anti-allergy; epitope; prophylaxis; treatment; mimotope.

This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

ANYSOB;6-Y50900 represent peptide mimotopes used in the method of the

                                                                                                                                                                                                                                                                                                                                                                       ö
                                 This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound igE, and which doesn't bind to igE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound igE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT	New antigenic peptide from the CH3 domain of immunoglobulin E, fusions for immunization against allergy -

New antigenic peptide from the CH3 domain of immunoglobulin E, fusions for immunization against allergy $\mbox{\ \ -}$

```
antigenic peptides (1). (1) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (1) induces polyclonal antibodies specific for a target effector site on the epsilon heavy chain of specific for a target effector site on the epsilon heavy chain of gress and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and may include cyclic constraints (asserted that the constraint may include cyclic constraints).
                                                                                                                                                                                                                                                             maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogentc) antibodies. AAY79994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                        present invention describes immunoglobulin E (IgE)-CH3 domain

specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermaititis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope conjugates of (I) that include a promiscuous T helper cell epitope arget epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe maximize cross-reactivity to the natural target. They induce safe con-anaphylactogenic) antibodies. AAY79994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          promiscuous T-cell epitope; measles virus F protein; MVF; hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CDV receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IGE; anti-allergic; plasmodium falciparum; circumsporozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                       ö

peptides comprising sometostatin, and a Th epitope. Sometostatin manuscons may be used to promote growth in livestock. AAY91208 is a human CD4 CDR2-like domain antigenic stre, and AAY91209-Y90210 are MVH Th epitope/CD4 CDR2 antigenic peptides which may be used to prevent HIV ceptope/CD4 CDR2 antigenic peptides which may be used to prevent HIV ceptope/CD4 CDR2 antigenic and AAY90212 is a modified version of a human IgE (immunoglobulin B) CH3 domain, and AAY90213-Y90219 are Th epitope/TgE CH3 antigenic peptides which may be used in the treatment of allergies. AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid protein and AAY91221-Y91221 comprise this peptide and a Th ceptope. AAY91223 is a Plasmodium falciparum circumsporozoite (CS) target epitope and may be used in a malaria vaccine. AAY91228-Y9121 represent corp. CETP peptides and AAY91223-Y91241 are immunogens comprising a retreated are anteriosclerosis and cardiovascular disease. AAY91228-Y91257 are HIV-1 neutralishing B-cell epitopes, and AAY91252-Y91257 are HIV-1 neutralishing B-cell epitopes, and AAY91251-Y91251 and AAY91252-Y91257 are HIV-1 neutralishing B-cell epitopes, and AAY91251-Y91251 and HIV-1 B-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diliyen: In can reprace the control of the control 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Helper T cell epitope; peptide immunogen; LHRH;

breast cancer; endometriosis; boar taint; meat quality; immunocastration.
protein (CETP) or HIV epitopes, but more generally against any pathogen, Immunoreactive self-antigen or tumour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of luteinising hormone (LHRM) for contraception, treatment of hormone-dependent cancer, prevention of boar taint in meat, and for immunocastration); for promoting the growth of animals; or for treating allergies or arteriosclerosis. Incorporation of a promiscuous the functional in genetically diverse subjects) into an immunogen improves capacity to induce a subjects) into an immunogen response, resulting in production of antibodies against a target and partigen. The can replace carrier proteins and pathogen—derived T helper antipon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  epitope which may be used as a component in an anti-HIV-1 vaccine.

My191189 and AMY91199 are respectively an immunostimulatory invasin
protein epitope from Yersinia species, and hinge spacer peptide, both of
which may optionally be used in the antigenic peptides of the

The peptide immunogens cause hormone-releasing hormone (LHRH). The peptide immunogens cause holduction of specific immune response to LHRH which is involved in regulation of spermatogenesis, ovulation, oestrus, sexual development and secretion of sex hormones. Provision of a promiscuous T helper appliance (which is functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, tor use as (reversible) contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar taint (and improve meat quality) and for immunocastration. The present sequence appears in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunogenic; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-anaphylactic; anti-asthmatic; asthma; anaphylaxis; dermatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New peptide immunogen containing luteinising hormone-releasing hormone antigen site and helper T cell epitope, for e.g. contraception and treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW24102;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAW24102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                          antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies and anti-asthmatic properties. (I) induces polyclonal antibodies and anti-asthmatic properties. (I) induces polyclonal antibodies as perefit for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermathis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. (conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY79994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of 1gE, and so preventing triggering and activation of mast cells and basophils and downregulation of 1gE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against 1gE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY7994 to AAX80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAW24098-106 are peptide fragments containing at least 5 continuous amino acids of the partial canine immunoglobulin E (IgE) protein shown in AAW24097. The peptides are used for the preparation of anti-canine
New antigenic peptide from the CH3 domain of immunoglobulin E, fusions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunoglobulin E; IgE; anti-canine IgE antibody; allergy; canine; dog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                       The present invention describes immunoglobulin E (IgE)-CH3 domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Canine; allergy; antibody 15A.2; IgE; B cell; mast cell; anti-allergy;

This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound igE, and which doesn't bind to IgE when the igE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound igE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                   The invention provides immunoglobulin E (IgE) antagonists comprising one or more of the FcepsilonRI receptor-binding determinant sites of human IgE. The antagonists include IgE variants comprising an immunoglobulin template and binding determinant sequences (bds) CDbds, EFbds and the sequence shown in AAY42581. The CDbds (CD loop binding determinant sequence) are selected from the sequences shown in AAY42567. and the EFbds (EF loop binding determinant sequences are selected from sequences shown in AAY42578-Y42580. The variants are useful in raising and screening anti-IgE antibodies, in the isolation and purification of FeepsilonRI receptor and in the treatment and prophylaxis of allergic
                                                                                                                                   Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IgE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic

                                                                                                                                                                                                                                                                               The invention provides immunoglobulin E (IgE) antagonists comprising one or more of the FeepsilonRI receptor-binding determinant sites of human IgE. The antagonists include IgE variants comprising an immunoglobulin template and binding determinant sequences (bds) CDbds, EFbds and the sequences hown in AAY42581. The CDbds (CD loop binding determinant sequence) are selected from the sequences shown in AAY42581. The Sequences shown in AAY4258-44257 and the EFbds (EF loop binding determinant sequence) are selected from sequences shown in AAY4258-442580. The variants are useful in raisang and screening anti-IgE antibodies, in the isolation and purification of PeepsilonRI receptor and in the treatment and prophylaxis of allergic
Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IGE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunoglobulin B; IgB; epsilon heavy chain; antigenic; antigen; immunogenic; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-anaphylactic; anti-asthmatic; asthma; anaphylaxis; dermatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antigenic peptide from the CH3 domain of immunoglobulin E, fusions for immunization against allergy \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes immunoglobulin E (IgE)-CH3 domain antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 72; DB 20; Length 24;

and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allerques, e.g. food allerques, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY70994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE behan the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.
                                                                               Canine, allergy; antibody 15A.2; IgE; B cell; mast cell; anti-allergy; epitope; prophylaxis; treatment; mimotope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                        Binding proteins used for treatment or prophylaxis of canine allergy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
